

Emission Monitoring and Testing

American Engineering Testing (AET) offers a highly trained, experienced staff using state-of-the-art equipment. We provide stack emission monitoring and testing services for a variety of industries and consultants. Emission testing capabilities include:

- Volatiles/Semi-Volatiles
- Hazardous Air Pollutants (HAPs)
- Acid Gases
- Particulate Matter (PM/PM₁₀)
- Opacity
- Metals

Emission monitoring and testing services help our clients meet regulatory requirements, such as:

- National Emission Standards for Hazardous Air Pollutions (NESHAP)
- New Source Performance Standards (NSPS)
- Emission inventories
- Emission factor development
- VOC capture and destruction efficiency
- Total enclosure certification
- Control device removal efficiency
- Continuous Emission Monitoring systems (CEMs)
- Certification
- Relative Accuracy Test Audits (RATAs)

Emission monitoring and testing services allow our clients to optimize processes to increase productivity, decrease waste and reduce emissions. Among the services provided for process optimization are:

- Mass balance and recovery determinations
- Engineering testing
- Pilot and bench scale monitoring
- Research and development
